

# Example Timeline

This timeline maps one possible journey from first discussion to a funded PhD project. Beyond this route, we offer additional collaboration models and remain flexible in shaping new partnerships.

# Ways to Collaborate with Us

Together with our partners, we co-create opportunities that advance sustainability, exchange knowledge, and deliver real-world impact.

## Co-Create a PhD Project

Partner with University of Bath academics to jointly design and co-fund (50% to 100%) a three-year PhD project. You will work closely with our academic team to shape the project, contribute to ongoing supervision, and address sustainability challenges that are important to your organisation and to society.

You may also fund the initial MRes year, where students complete core training and two interdisciplinary research projects that you would co-design. This helps them build the skills and experience required to progress confidently into the PhD.

## Host an Internship

Offer our PhD students an internship of up to three months. Internships must relate to sustainability but do not need to align with the student's individual PhD research. This is a great way to bring fresh perspectives and skills into your team.

## Provide In-Kind Contributions

Support our community through in-kind contributions such as hosting site visits, delivering guest lectures, seminars or training, or providing materials or datasets.

## Interested in partnering with us?

Contact us to explore established routes or develop new approaches aligned to your priorities.
